# YAMAHA 100 STREET LS2

Looking for a bike to take you around town and on short trips? You've probably found you have a tough choice: a small sensible model that provides great economy and handling ease or a powerful sports type that has the zip you want but costs more to buy and run, weighs you down with extra power and weight you don't usually need. Here's the end of the dilemma — the peppy little LS2.

Styled for sleek power, the LS2 looks like the rest of the Yamaha outperformers, and it's got all those features that have made Yamaha teams

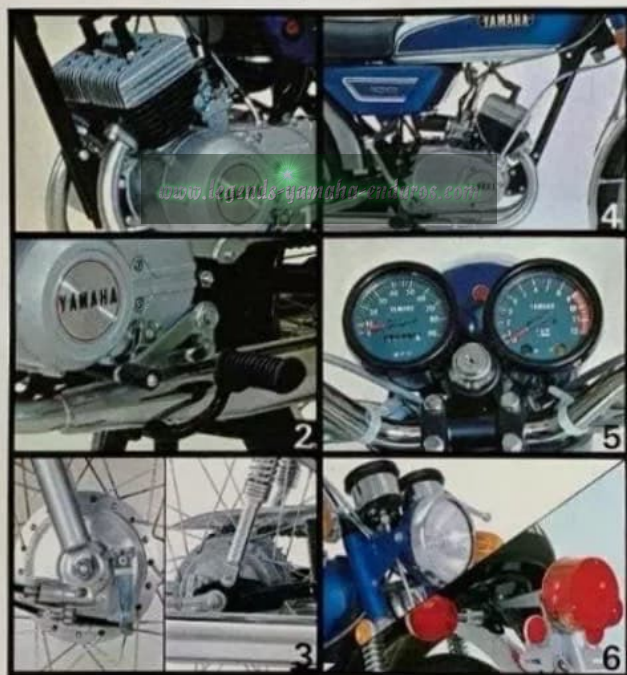

champions in rallies worldwide: unique 5-port engine design for extra power and durability, lower gas costs, Yamaha's exclusive Autolube automatic oil injection system, lightweight, responsive articulated suspension and fade-free dust-and water-proof safety brakes.

Top it off with big-bike features like sculpted seat, separate tachometer and speedometer, extra-generous head and taillight assemblies and you've got an unbeatable town and country runabout that will cut fuel and maintenance costs for years.

1. The Yamaha 5-port power system in this super twin gives extra-efficient fuel intake, more efficient exhaust gas scavenging, cuts fuel costs and power rises to the championship level.

2. Any good sports bike deserves an outstanding transmission, and with a full 5 gears the LS2 provides maximum torque and power on any road for smoother, fatigue-free running.

3. Extra-large, fade-free brakes, front and rear, are specially sealed against moisture and dust for safety at any speed.

4. Tough, durable diamond type frame, perfectly designed for the LS2. Takes years of beatings on washboard roads, starts and stops in town. Its light weight means more handling ease and economy.

5. Separate tachometer and speedometer assure quick-glance control of engine rpms and speed for safer rides and engine care. Special shock- and vibration-proof mounts.

6. Powerful headlight lights the whole road ahead at night, complemented by oversized taillight/reflectors or assembly coupled to both brakes. Day/night turn indicators front and rear.
